## Business Unit Packaging Machines The right solution through modularity – fast, flexible and reliable.

Growing customer segmentation is leading to shorter and shorter product life cycles and an increasing range of goods. With increased cost-pressure at the same time, new concepts are demanded. Bosch Packaging Machines, a business unit of the Packaging Technology Division of the Bosch Group, provides you with reliable solutions for a variety of different products and industries. You can rely on proven technology starting with standard machines for flexible packaging styles, automation, product handling and secondary packaging. Through the modularity of our machines we are able to offer you flexible, integrated and economic lines. We call this concept Module++.

When you decide on Bosch Packaging Machines you are making a decision in favor of individual support and the dependability of obtaining a suitable solution from one source without high coordination and project costs while also delivering more success in the market.

# Other countries. Other requirements. Other solutions.

For a small regionally operating enterprise it is often difficult to assert oneself in the market with suitable solutions that are also innovative at the same time. Bosch Packaging Machines stands by your side as a global partner with a regional focus through manufacturing sites and local application engineers all over the world.

**Business Unit  
Packaging Machines**  
As a global partner with a regional focus you may rely on our worldwide application and industry know-how.

Bosch Packaging Machines provides proven products along with a service unmatched by other competitors. This is achieved only through a functioning worldwide network and a lively interchange between our highly qualified engineers, service technicians and local sales representatives. With our global structure we are thus able to offer short lead times and tried and tested solutions that are nevertheless completely new for the respective region.

This treasury of experience in worldwide application and industry know-how is the basis for fast and reliable solutions provided to both new and existing customers.
